The tragic suicides of several teens who experienced cyberbullying have shined a bright light on a significant social problem that, if left unchecked, stands to detrimentally affect the current generation of youth. Wanting to intervene in some way, many parents, educators, and other professionals who work with adolescents are looking for information to educate themselves about this problem. Even though it may seem fairly new to them, a core group of researchers, educators, counselors, and others have been exploring this problem for several years, and therefore have a unique, empirically informed perspective to offer. This book represents a compendium of the lessons learned through their efforts.
