In 2010, Wisconsin voters propelled Republicans to victory in unprecedented fashion, making it the only state in the election cycle in which one party lost majorities in both houses of the state legislature and the governorship. The purpose of this paper is to use cartographic illustrations at the county and voting district levels to provide spatial evidence of voting patterns in the state of Wisconsin. This study also provides a technological framework for troubleshooting election reporting methods that do not align with voting district shapefiles in a GIS format.
