2018 Unimin Corp. Internships

The chair has spoken with Unimin, and a geology major is considered a related field of study for these internships. Thus, our Geology majors should apply. Apply for all internships where you would be willing to live and work for a summer. They are interested in receiving applications from Geology sophomores through graduating seniors. Applications by 2/16/18 will be screened first, but applications after that time could also be considered.

Guion, Marston, North Utica, Roff, Tunnel City, and Kasota are sand facilities (could be for glass, frac sand, or other industrial uses). Tunnel City and Kasota have a large frac sand component to their production.

Here are the links to the internships:
