Why does it seem like attention is so challenging for a person with autism spectrum disorder (ASD)? Come learn about what researchers are discovering about the neurobiological basis of attention. See how this research and field experience yielded a protocol designed by Dr. Mayne, titled the Autism Spectrum Disorder Attention Profile. By attending this presentation, you will learn about ASD, the factors contributing to the mask of attention, and a framework professionals may add to their repertoire to analyze communication behaviors including attention for a person with ASD.
